

**Environmental  
Literacy Through  
Education &  
Curriculum**

Environmental Literacy entails possessing the knowledge, abilities, and attitudes necessary to address challenges and tackle issues, both independently and collaboratively, in a manner that promotes ecological, economic, and social stability. Our NGSS standards ensure we are promoting these ideas.

**Create a Culture of  
Sustainability on  
Campus**

This is just the way we do it at PVPUSD! The district honors the rich geographic and historical context, as we are located on the ancestral land of the Tongva Nation. PVPUSD integrates our natural environment and its rich heritage into our curriculum, our campuses and our student activities.

**“Green” Facilities  
and Create  
Sustainable  
Systems at District  
Level**

Sustainability needs to include social equity and economic development. One way to achieve this is to create sustaining systems to ensure accountability and provide a continuance in all programming and systems.

**Develop  
Partnerships -  
Connection to  
Community**

Our PVPUSD affiliates PV School Gardens and PVP Land Conservancy continue to guide us in creating opportunities to provide our students with real world NGSS experiences and give back to our community. As a District, we strive to develop partnerships to ensure we are growing students who will continue to give back to their community and beyond.

**AWARENESS - KNOWLEDGE - ATTITUDES - SKILLS - ACTION**
